

Press release

OPCSA Las Palmas to report its performance with DATAVIEW from DSP

December 2018 OPCSA successfully migrated its operation to NAVIS N4 and at the same time went live with DSP DATAVIEW to generate its operational reports

Manno, 12th March 2019

“Operaciones Portuarias Canarias, S.A. (OPCSA), wholly owned by TIL Group, has successfully transitioned from the Cosmos TOS to N4. With the new operating system in place, OPCSA has three main objectives – to improve the efficiency of local operations, initiate the modernisation process and increase productivity of the terminal” announced NAVIS.

DSP DATAVIEW is a data analytics tool, based on Microsoft SQL Reporting Services. DATAVIEW gathers all operational data through the native N4 interfaces, connecting to NAVIS N4 production replica database, with full guarantee of performance and stability.

Reports are based on a multidimensional database designed by DSP for data mining and reporting, ensuring high performances.

Statistical data will always be on line for multiyear comparison and analysis, regardless of archiving and purging settings of N4.

Over a 2 months project, DSP installed, connected and delivered the first set of reports, including the Terminal Departure Report (TDR) and in a second phase, provided full training services, enabling OPCSA team to generate new reports, KPIs and analysis from the DATAVIEW database, independently.

*“We are really proud –says **Marco Fehmer, CEO of DSP** – of DATAVIEW. It was born from experience on operations with the idea to provide a friendly and quick solution to terminal planners and managers, struggling to analyse their data and use them as decision support enablers. DATAVIEW is complementary to N4 as it’s capable to generate complex reports of aggregated data, with key performance indexes customised for their specific needs.”*

*“We are extremely satisfied with DATAVIEW and with the professional support received by DSP on this project. We felt talking with pairs, not only with a technology solution provider but with terminal operations experts that could actually bring value in the definition of our reports and KPIs”, says **Captain Jan Nowak, CEO of OPCSA Las Palmas** .*

DATAVIEW is scalable and open to be expanded to financial, HR, technical data and become the report generator for the whole Company.

About Data and System Planning

Founded in 1986, Data and System Planning provides worldwide IT solutions and business operation consultancy taking advantage of its specialised and proven know-how in informatics technologies applied to the shipping industry, port and terminal management and intermodal transportation.

DSP is a NAVIS partner since 2007 covering all implementation, maintenance and personalization services.
